

**FIN COLOR PLY** is a presurfaced multi-purpose plywood developed for industrial use.

Architects and designers have had great success using FIN COLOR PLY for interior panels, furniture, shelving, office workstations, and cabinetry.

**FIN COLOR PLY** panels are presurfaced on both sides with a smooth colored translucent film. **FIN COLOR PLY** is available in seven colors: light brown, black, clear transparent, green, red, yellow, and dark brown.

The natural wood grain is visible through the translucent color surface making each panel unique. **FIN COLOR PLY** is a natural material, with variations in color, grain, and tone. Individual panels may vary in the luster or matte character of their finish, imbuing each panel with a unique depth of tone. Lighter colors reveal more of the natural characteristics of wood. All colors may deepen with age.

**FINLAND COLOR PLYWOOD CORPORATION** imports this unique product directly from Europe. Birch plywood is renowned for its consistent HIGH QUALITY and UNCOMMON STRENGTH.

**FIN COLOR PLY** is constructed of 1.5mm Finland birch hardwood veneers. This construction provides superior strength and density.

**FIN COLOR PLY** is presurfaced and ready to use, eliminating the need for most finishing techniques.

The PREFINISHED SURFACE is smooth, nontoxic, durable, and easy to maintain. The surface is highly resistant to stains and abrasion, making it an ideal material for many uses. Although **FIN COLOR PLY** is a multiple use material, it is not intended for exterior use.

**FIN COLOR PLY** is available in a panel size of 96" x 48" (short-grain, spliced face) and in thicknesses of ½" (9-ply) and ¾" (14-ply).
