

Cleaning Recommendations for Finland KoskiForm & KoskiTransparent:

Abrasive cleaners should not be used, as they will dull the surface (i.e. Comet, Ajax, Soft Scrub).

Do not use acid based cleaners.

Solvent based cleaners are preferred (Isopropyl alcohol base) to clean the color phenolic film.

Alkali based (ammonia based) are not advised on color film, however on clear melamine either solvent based or alkali based cleaners can be used.

Suggestion:

Use an easily available alcohol base cleaner, and try it on a small area first. The solvent based cleaners are good for cleaning grime.
